

Welcome to Viridor's OpenSpace

Revolutionising the way environmental
data is made available

Viridor's OpenSpace web portal is one of the most groundbreaking projects between the Environment Agency and the waste industry in embracing contemporary data management practice to enable timely review of the environmental performance of Viridor's facilities.

The screenshot shows the Viridor OpenSpace web portal. At the top left is the Viridor logo, and at the top right is the text "Welcome to Viridor OpenSpace". Below the header is a navigation bar with a "Home" link on the left and "Login | Language | English (UK)" on the right. The main content area has a dark blue background with the "OpenSpace" logo in white and green, and the tagline "Engaging through openness to create change." below it. On the right side of the main area is a "Login" form with fields for "User Name:" and "Password:", a "Remember me next time." checkbox, and a "Login" button. At the bottom of the page, there is a footer with the text "MPS.WEB Version 1.0.0" and "Copyright 2010 EHS Data Limited. All Rights Reserved - UK +44 (0) 845 388 2458 enquiries@ehsdata.com".

ENVIRONMENT
AGENCY

What is OpenSpace?

OpenSpace is an interactive web page developed in partnership between the Environment Agency and Viridor that enables you to view our environmental compliance data via a series of structure queries on any computer linked to the internet. It revolutionises the way environmental data is made available by an Operator to the Environment Agency, and ultimately other interested parties in our environmental performance.

OpenSpace is the product of a four year change programme within Viridor that has examined and changed every aspect of the way we schedule, obtain and process our environmental data. In partnership with EHS Data, enitial, Severn Trent Services and the Health and Safety Laboratories, we have redefined the standards for the automated and standardised scheduling of environmental work across the UK waste and environmental industries. This has included the first database scheduling link to a laboratory as well as a partnership development

with enitial to use PDA technology to obtain field data in a consistent and quality assured manner. Everything visible within OpenSpace is underpinned by multiple layers of quality assurance to ensure the key data and our associated management actions can be communicated in a timely and contemporary manner to the Environment Agency.

Through partnership development between the Environment Agency, Viridor and EHS Data, OpenSpace has been designed to enable both compliance and tactical management data to be presented in tabular and graphical formats together with an integrated linkage to our scheduled notifications in the event of a permit trigger exceedence.
